

# S-N Series

## Magnetic Contactors

 **MITSUBISHI**  
**ELECTRIC**

Mitsubishi Electric Automation, Inc.

Discover the Many Facets of Mitsubishi Electric. The Power in Automation Solutions.

# S-N Series

## Substantial safety and functionality with a full lineup

### Incorporation of CAN Terminal for Simple Wiring

By adopting a CAN terminal, there is no need to remove the screws. The integrated terminal screw is set in a plastic screw holder to prevent the loss of the screw. When the screw is loosened, the screw naturally sets in the screw holder. This is Mitsubishi Electric's original CAN terminal. (Patented)

### Unified Design for N Series

The design of the S-N Series has been unified with a white front face brightening the inside of the panel and providing a cleaner image.

### Compatible with International Standards

Most of Mitsubishi Electric's standard products comply with International Standards. Applicable standards: JIS, JEM, IEC, EN, V DE, BS. Approved standards: UL, CSA, LR, BV, NK, KR, TÜV.

### Small-Sized Models S-N10~N35

The S-N Series contactors, starters and relays can be installed on a mounting rail (35mm width). The terminals of these coils are arranged on the contactor with wiring in mind. Furthermore, the distance between the center of the rail and the coil terminals is unified at 38.5mm. (S-N10 to N21, SR-N4)

### Simple Inspections

Contactors can be inspected easily by removing the arc cover.

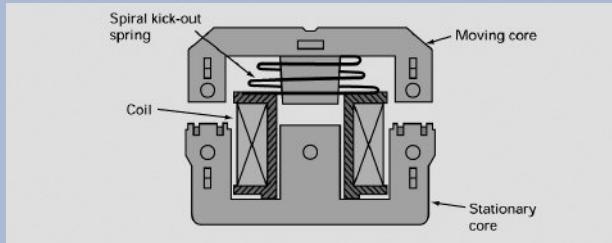

### Built-in Surge Absorber

Models with optional built-in surge absorbers on the coil are available.

### Safe and Speedy Terminal Functions

Models which have finger protection provide a more safe and speedy connection, even when using closed eyelet (ring) terminal lugs. (S/SD-N□□CX, TH-N□□CX, SR/SDR-N4CX)

### Medium and Large-Sized Models: S-N50~S-N800

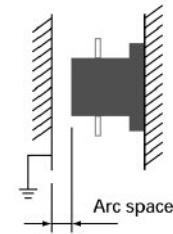

### Improved Magnet

Use of a spiral kick-out spring improves the dynamic balance of the moving parts, extending the core life and generally stabilizing the core movement. Through the use of modern technology, the efficiency of the magnet has been improved. The contactor can withstand a voltage drop of 35% with the contact closed.

### Arc Space Reduced to One-Third!

By developing a new extinguishing mechanism, the arc space has been reduced to approximately one third. (Mitsubishi Electric comparison).

Frame	Arc Space (mm)	
	S-N	S-K
N50/N65	5	10
N80/N95	10	10
N125-N220	10	30
N300/N400	10	50
N600/N800	10	10

### Arc Blowoff Improved for Safety and Space Conservation

The new extinguishing structure eliminates arcing toward the front (in the direction of the control panel door) when current is cut off. This new element improves safety and potentially saves space.

## DC Electromagnet with AC Operation (Patented)

### Lower Power Consumption

Low coil power consumption allows the S-N Series contactors to be controlled by almost any type of relay, even the small output relays of programmable controllers.

### Less Noise or Surge From Coil

When switching a coil, the energy is dissipated within the internal circuit of the electromagnet.

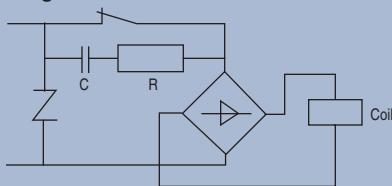

### Humming Completely Eliminated

DC excitation does not cause humming, providing quiet operation.

### Contactor Coils Have Ultra-Wide Range of Ratings

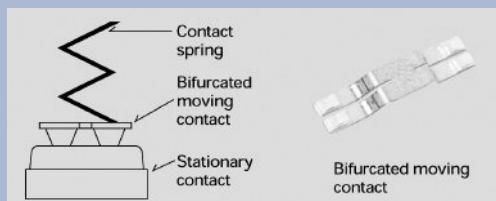

The number of coil types has been cut by two-thirds and there is no need to re-wire for different frequencies. The coil also withstands large voltage drops.

### Electromagnetic Internal Circuit

## Even Greater Contact Reliability

The bifurcated auxiliary moving contact has improved contact reliability.

## One-Touch Surge Absorber

If the magnetic relay coil is opened and closed near an electronic circuit, malfunctioning of the electronic circuit could be induced by a surge voltage. The UN-SA type surge absorber suppresses the surge voltage when the coil is opened and closed. In addition to the general varistor type and the CR type that lays importance on suppressing the induction voltage when starting, the type with operating indicator (varistor type), and the varistor type with CR are available.

### Auxiliary Contact Unit with Low Level Contact

This auxiliary contact unit with low level contact is capable of opening and closing low voltage and minute current of an electronic control circuit. It can be installed with one touch onto the magnetic contactor or magnetic relay that opens and closes the power of the motor, etc. A junction relay for opening and closing the low voltage and minute current is not needed, so this unit is suitable for opening and closing electronic input circuits in programmable logic controllers, etc. A compact microswitch is used for the low level contact, so the unit will not malfunction due to surge voltages from the main circuit current and coil of the magnetic contactor. A 1a1b low level contact and 1a1b standard contact are built-in, so the opening and closing of 200VAC and 24VDC can be handled with one unit.

## Interface Unit

**2 Types of Inputs:** The long life no-contact output type (UN-SY21, SY31) and contact output type (UN-SY22, SY32) are available.

**One Touch Installation:** The UN-SY21, SY22, SY31 and SY32 can be mounted with one touch on to the coil terminal making post-installation work easy.

**Single Stand-Alone Unit:** A single unit installation type (UN-SY11, SY12) is available for the S-N80 to N400 magnetic contactor.

# **General Purpose Contactors & Starters**

#### **Series S-N Conformity to International Standards**

Mitsubishi Electric magnetic motor starters and contactors are designed to conform to the relevant IEC recommendations and to the standards of as many countries as possible. Specifically, they conform to the following:

VDE0660 Germany  
IEC60947-4-1 International

NEMA-ICS U.S.A.  
EN60947-4-1 Europe

---

**Notes:**

- Notes:**

  - CE Mark (Manufacturer's Declaration) == Standard model applicable, marking on the product.  
UL, TÜV == Standard model applicable, marking on the product.  
NK == Standard model applicable, Certificate No. on the product.
  - ▲ Standard model applicable, no marking on the product. If marking required, order model name followed by suffix "DZ".
  - Standard model applicable, no marking on the product.
  - ★ Special model applicable, marking on the product. Order model name followed by suffix "UL".
  - ☆ Special model applicable, marking on the product. Order model name followed by suffix "UR".
  - Not applicable to the Standard or not approved.

Notes:

- Number of auxiliary contact shown is for non-reversing type. Twice the auxiliary contacts are provided on reversing type.
- Front clip-on and side clip-on block should not be used on the same unit.
- S-2XN125 ~ S-2XN800 available as components only.

## Type Designation Breakdown

### Non-Reversing Types

Frame Size	N10	N11	N12	N18	N20	N21	N25	N35	N50	N65	N80	N95	N125	N150	N180	N220	N300	N400	N600	N800
Accessories	Surge Absorber	Attachable										Provided as standard								
Mechanical Interlock Unit	Attachable	—	Attachable										—	—	—	—	—	—	—	—
Din Rail Mounting	Standard										—	—	—	—	—	—	—	—	—	—

### Reversing Types

Frame Size (*1)	2X N10	2X N11	2X N18	2X N20	2X N21	2X N25	2X N35	2X N50	2X N65	2X N80	2X N95	2X N125	2X N150	2X N180	2X N220	2X N300	2X N400	2X N600	2X N800	
Accessories	Surge Absorber	Attachable										Provided as standard								
DIN Rail Mounting	Available (*2)										—	—	—	—	—	—	—	—	—	

Notes:

- S-2XN125 ~ S-2XN800 are available as components only.
- Remove mounting plate for mounting on 35mm rail of sizes 2XN25 to 2XN65.

Notes:

1. 660A at ambient temperature 40–55 °C.
2. 800A at ambient temperature 40–55 °C.
3. Conductor size in parentheses indicates compression terminal style not for bare clamping.
4. The peak value of inrush current should be less than 2000% of the effective value for rated current of capacitors. The selection is invalid for the circuit of parallel capacitors which are controlled individually.

### Rated Operating Current of Auxiliary Contacts

Rated Continuous Current	A	16
120 VAC	A	6
240 VAC	A	5
500 VAC	A	3
660 VAC	A	1.5
24 VDC	A	5
48 VDC	A	3
110 VDC	A	0.6
220 VDC	A	0.8 (*1)

Note:

1. UN-AX2(CX), UN-AX4(CX), UN-AX11(CX)

## S-N Contactor Performance

Electrical Life

The electrical life of the main contacts of a contactor is determined mainly by the circuit-opening duty it will perform. The relationship between electrical life and rated current of Mitsubishi Electric contactors under normal and jogging duties of squirrel-cage motors is shown in figures at right. In the case of a mixture of normal and jogging duties, the expected contactor life can be determined as follows:

$$N = Nr/1 + a /100 (Nr/NI -1)$$

where: N : Life in the case of a% jogging duty  
 Nr : Life in the case of normal duty  
 NI : Life in the case of 100% jogging du  
 a : Percentage of jogging duty

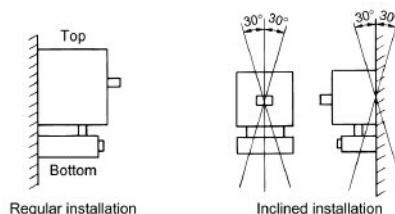

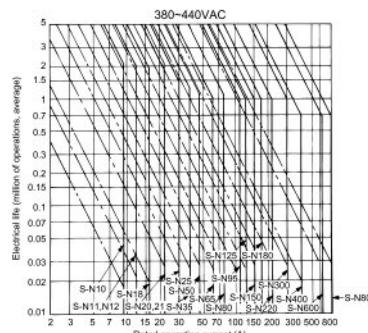

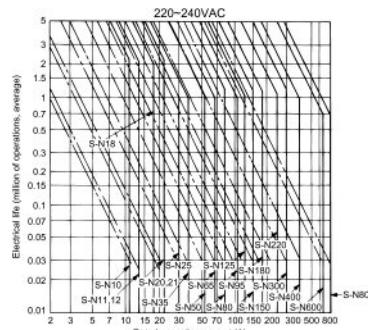

#### **Electrical life versus rated operating current**

—Normal duty, 6le on, le off, on-load factor 40%,  
 - - -1200 operations/hour (AC3)

Jogging duty, 6le on, 6le off, on-load factor 7%,  
600 operations/hour (AC4)-S-N10-S-N300  
300 operations/hour (AC4)-S-N400-S-N600  
150 operations/hour (AC4)-S-N800

#### **Mounting Attitude of Starters and Contactors**

To assure proper performance, Mitsubishi Electric magnetic motor starters and contactors should be mounted on a vertical supporting surface with the line terminals upwards and the load terminals downwards. The supporting surface may have a maximum inclination of 30° from the vertical in any direction.

## **Ordering Information**

**Contactors – Indicate the model name and the ordering designation of the coil:**

**Example:** S-N11(CX) AC120V

Model name \_\_\_\_\_ Ordering designation  
of the coil \_\_\_\_\_

**Example:** S-2XN11(CX)UL AC120V

Ordering designation  
of the coil

**Overload Relays – Indicate the model name and the ordering designation of the heater setting range:**

**Example:** TH-N12(CX)KPUL 3.6A

Model name      Ordering designation  
of the overload relay

## **Coil Ratings and Ordering Designations for S-N10(CX)~S-N48(CX) (as well as reversing versions) and SR-N**

Rated Operating Voltage (VAC)		Ordering Designation
50Hz	60Hz	
24	24	AC24V
100	100~110	AC100V
110~120	115~120	AC120V
200	200~220	AC200V
—	208~230	AC208V
220~240	230~240	AC230V
380~415	400~440	AC400V
415~440	460~480	AC440V
500	500~550	AC500V

## **Coil Ratings and Ordering Designations for S-N50~S-N800 (as well as reversing versions)**

(as well as reversing versions)	
Rated Operating Voltage at 50/60Hz (VAC)	Ordering Designation
100~127	AC100V
200~240	AC200V
380~440	AC400V
460~550	AC500V

## Coil Ratings and Ordering Designations For All SD-N and SRD-N

Rated Voltage (VDC)	Ordering Designation
24	DC24V
48	DC48V
100	DC100V
110	DC110V
120~125	DC125V
200	DC200V
220	DC220V

# Motor Protection Relays

## Thermal Overload Relays

### TH-N Thermal Overload Relays – A Convenient and Safer System

The TH-N Series overload relay will protect a motor from burnouts caused by overload, locked rotor, or single phasing. A relay is a three pole, bi-metal, non-interchangeable heater element type (phase failure protection). Although designed as a three phase device, TH-N overload relays can be used to protect single phase motors by connecting two heaters in series to one motor leg, and connecting the third heater to the other motor leg.

#### Maintenance and Inspection

An operation indicator makes maintenance and inspection easy. Checks can be performed using manual operations.

#### Rated Current Can Be Set Easily

The rated current value is displayed on a dial. Simply adjust the dial to the full-load current of the motor to assure motor protection.

#### Finger Protectors

TH-N12(CX), TH-N18(CX) and TH-N20(CX) have finger protection as standard.

They conform to DIN-VDE\_0106 part 100.

TH-N60, TH-N120, TH-N220 and TH-N400 are not available with finger protection.

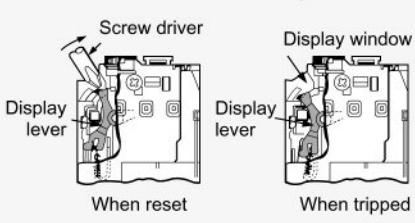

#### • Display and External Trip Mechanism

##### TH-N12(KP)

###### Display

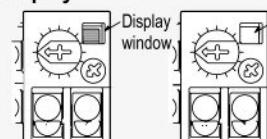

###### External Trip

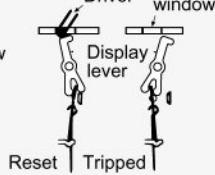

##### TH-N20(KP)~N600(KP)

###### Display

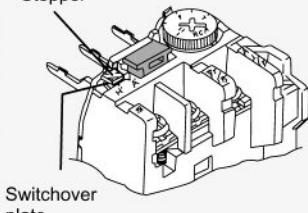

###### Display window

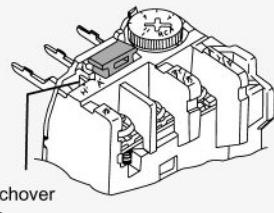

#### • Switching Between Automatic and Manual Reset

##### TH-N12(KP)~N600(KP)

###### Manual Reset Mode

###### Automatic Reset Mode

##### TH-N20(KP)~N600(KP)

Switching from manual to automatic : Flip the stopper on the end of the reset bar down and then, after pushing it all the way in, rotate it counterclockwise 90° (to position "A").  
Switching from automatic to manual : Rotate the reset bar 90° clockwise (to position "H") and the reset bar will pop out.

## TH-N Thermal Overload Relays Selection Guide

## Electronic Motor Protection Relays

The Mitsubishi Electric series ET-N relay is an excellent relay that can protect motors electrically. The Series ET-N relays have the following excellent features. These relays are not UL recognized or CSA certified.

### Features

- Selectable protection model
- Overload (including locked rotor condition)
- Phase failure (including current unbalance)
- Incorrect phase sequence
- Excellent wide current range
- Easy wiring
- Easy setting and maintenance
- Selectable tripping time at 600% of setting
- Standard trip (7s.)
- Quick trip (3s.)
- Fast trip (5s.)
- Medium trip (15s.)
- Slow trip (30s.)
- Withstands high overcurrent
- Fine indication of trip mode
- Conformity to International Standards

### ET-N60-8A100V

Frame Size	
Frame Size	Current Range
60A Frame	1A 0.25-1.0
	4A 1.0-4.0A
	8A 2.0-8.0A
	20A 5.0-20A
	60A 15-60A

	Control Terminals	mm <sup>2</sup>			1.25-2			

Note: ET-N relay cannot be used on DC circuit.

### Characteristic Curves

### Selection of Protection Mode & Tripping Time

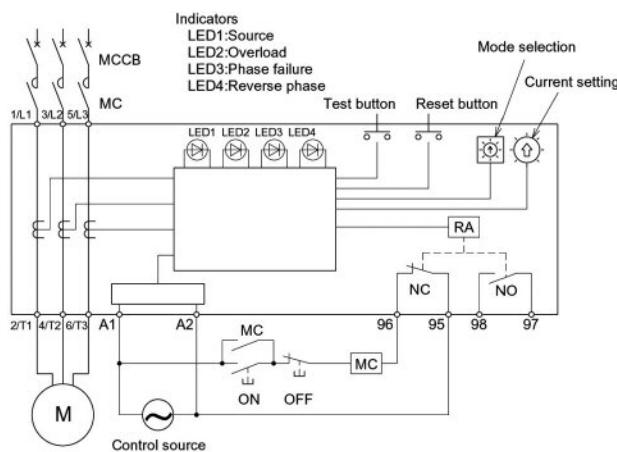

The selector switch is set at position "7" (overload and phase failure protection mode; standard trip type) when shipping. Reset the position of the changeover switch according to the table at right before installation.

### Application to High Voltage or Big Motor Circuit

The high voltage current transformer (secondary current: smaller than 5A; capacity: more than 5VA) should be connected to ET-N60□8A in the star connection, when the load is high voltage or large AC motor.

Protection Mode	Overload Tripping Time at 600% of Setting	Symbol on Changeover Switch
Overload, Phase Failure and Reversal Phase [3E]	3	0
	5	1
	7	2
	15	3
	30	4
Overload and Phase Failure [2E]	3	5

	30	E

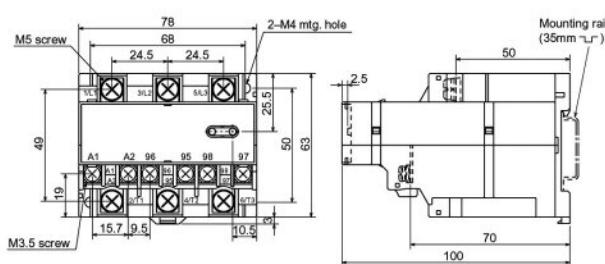

## Wiring Precautions

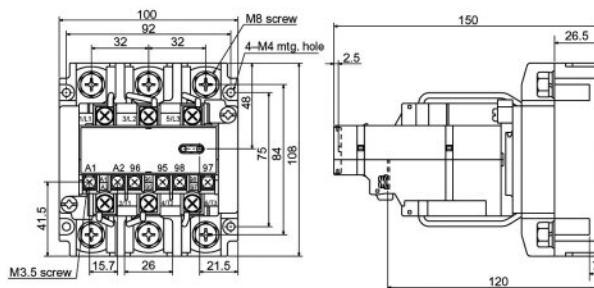

## Wiring Precautions

- The control source should be wired in the same phases as the contactor control source.
- When the load is a single phase motor, use 1/ L1-2/T1 and 5/L3-6/T3 phases. And reset the position of changeover switch from "A" to "E".
- If capacitors are used to correct the power factor, connect the capacitor in the power source side of the ET-N relay.

# Definite Purpose Contactors

## DC Contactors

### Series DU

The Mitsubishi Electric series DU contactors are designed for DC circuits, that is the variable-speed drive-control circuits (SCR switching circuit) and DC motor control circuits.

DU-A60

DU-K180

### Features

- Compact design
- High break capacity
- CSA certified models are also available on AC operated type, add suffix "UR" immediately after the Frame size.
- Double break contacts
- UL recognized component (If marking is required add suffix "UR" immediately after the frame size).
- Long life

### DU - A60 AC230V

## AC Contactors - UL

### S-U Series

S-U contactors are compact horsepower rated devices used in lighter duty applications such as compressors, blowers, fan and pump motors and resistance heaters. A spiral kick-out spring is employed to improve pick-up performance under low voltage conditions. Contactors can be screw or DIN rail mounted, with or without 1NO-1NC A600 auxiliary contact blocks, and with or without quick-connect terminals. Reversing contactors are not available with quick connect terminals. Electrical life at full load is 500,000 operations. CSA certification is pending.

### Series S-U Rating and Ordering Information

Continuous Current Rating A	Maximum Horsepower Rating				Contactor Type	Auxiliary Contacts	Terminal Type	Complete Model Number (*1)				
	Full Load Current Must Not Exceed "Continuous Current Rating"											
	Single Phase		Three Phase									
	115V	230V	200-230V	460-575V								
15	1/2	1-1/2	3	5 (*2)	Non-Rev.	None	Saddle Clamps	S-U12UL AC□□□V				
						1NO - 1NC	Saddle Clamps	S-U1211UL AC□□□V				
						None	Quick Connect	S-U12FTUL AC□□□V				
					Rev (*3)	None	Saddle Clamps	S-UR12UL AC□□□V				
						1NO - 1NC (*4)	Saddle Clamps	S-UR1222UL AC□□□V				

#### Notes:

1. To complete Model Number, insert Coil Designation from table below, e.g./S-U12FTUL AC24V.
2. Derated to 1 HP on S-U12FTUL (Use insertion sleeve).
3. Reversing contactors are unwired. Order CONNTBH509N362 (for S-UR12UL) or CONNTBH509N363 (for S-UR1222UL) wiring kit if required.
4. Each direction.

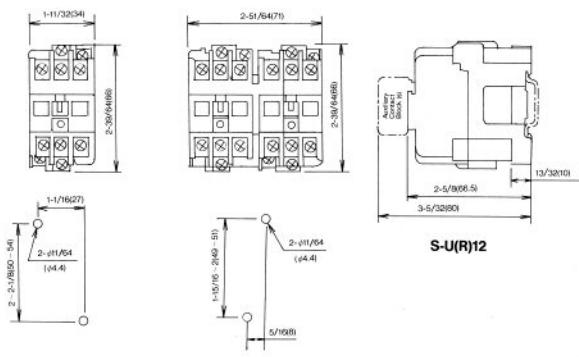

### Series S-U Coil and Wiring Data

Terminal Type	Saddle Clamp	Quick-Connect
Coil Consumption (at Rated Voltage)	Inrush (VA)	45
	Steady State (VA)	8
	Watts	3
Wire Size	Main Circuit	#12 ~ #14 one or two .250" single tabs
	Control Circuit	#14 one or two .187" single tabs

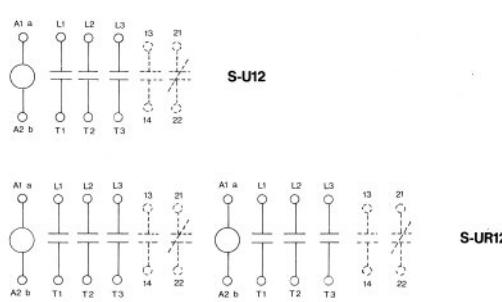

### Series S-U Coil Designation Table

Rated Voltage		Coil Designation

400~440	380~415	AC400V
460~480	415~440	AC440V

### Dimensions in Inches (mm)

### Contact Arrangement

## DC Interface Contactors

### SD-Q Series

The Mitsubishi Electric Series SD-Q contactors are specially designed to be directly driven by the transistor output (DC24V) of a programmable sequence controller, etc.

### Series SD-Q Features

- Low coil power consumption: By combining an electromagnet with permanent magnet, coil operating current is reduced to DC24V 55mA (1.3W) for SD-Q11, Q12 and 75mA (1.8W) for SD-Q19.
- Compact construction: Width 45mm, Height 51mm, Depth 66.5mm in Type SD-Q11
- Can be mounted on 35mm rail
- Coil surge absorber
- Safety clear terminal cover
- Easy wiring: All terminals are in the same plane
- UL/CSA approved
- Auxiliary contact block available for SD-Q11 and SD-QR11

### Type Designation

Type			Non-Reversing	SD-Q11, SD-Q12	SD-Q19

## Compact 3-Pole Contactors

### Series S-N□8

The Mitsubishi Electric series S-N□8 compact 3-pole contactors are designed for limited panel space applications such as machine control panels.

### Series S-N□8 Features

- Compact design – Very limited mounting space required.
- Front clip-on type auxiliary contact block can be added.
- Coil surge absorbers are available.
- Mountable on 35mm rail.

## Specifications

# DC Interface Modules

## Series UN-SY

The Mitsubishi Electric type UN-SY interface module is an optional unit for S-N series contactors or SR-N series relays, controlled by the transistor output of a programmable controller.

### UN-SY Features

- Easy mounting on the Type S-N10 to S-N65 contactors and SR-N series relays.
- Separate mounting type for the Type S-N80 to S-N400 contactors.
- Relay or solid state output versions are available.

### Ordering Information

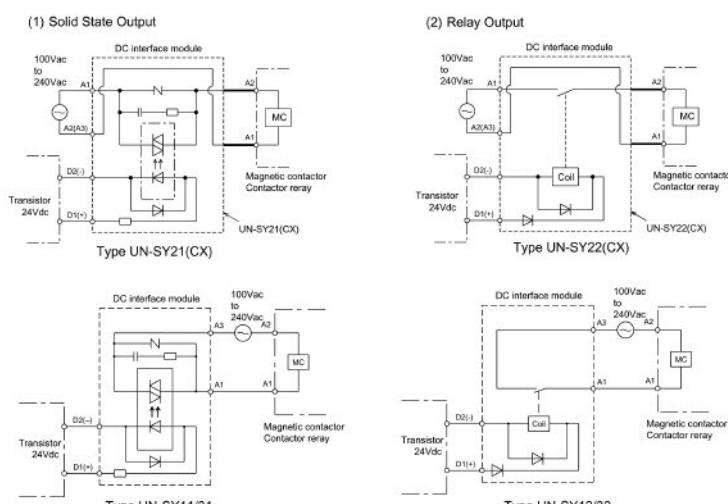

**UN-SY 1 2 CX**

Applicable Contactor or Relay		Finger Protection	
UN-SY2	S-N10 to N35, SR-N4	*	None
UN-SY3	S-N50 to N65	CX	With Finger Protection
UN-SY1	S-N80 to 400		
Output			
1	Solid State Relay Output	1	
2	Relay Output	2	

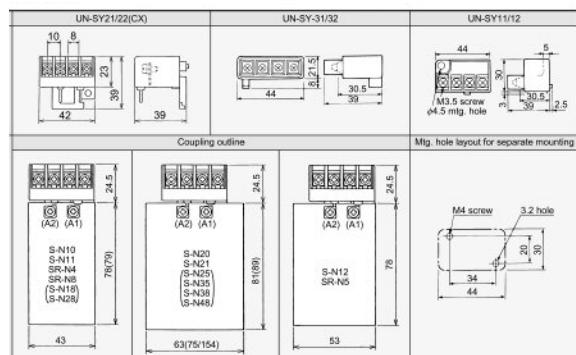

### UN-SY Specifications

Type	UN-SY21(CX)	UN-SY31	UN-SY11	UN-SY22(CX)	UN-SY32	UN-SY12

Ambient Temperature	-10 to 55°C					

### Connection

### Outline and Mounting Dimensions

### UN-SY Mounting

Direct mounting – Type S-N10 to S-N65 and SR-N4

Remove the coil terminal screw from the contactor or relay, then slide the tab on the interface module to the groove on the contactor or relay. Fasten the connecting conductor with the coil terminal screw.

Separate mounting – Type S-N80 to S-N400

Mount the interface module (UN-SY11/12) with screw on a panel.

# SR-N Relays

## Series SR-N Contactor Relays

The Mitsubishi Electric Series SR-N contactor relays are specially designed for use in low voltage control circuit applications. Series SR-N has many superior features.

### Features

- High reliability: By adopting bifurcated moving contacts and by improving the shape of the contacts, contact performance has been made more reliable than ever.
- Long life
- Mountable on 35mm rail
- Dust-proof construction
- Easily visible coil ratings
- Easy wiring (self-rising terminal screws)
- Various accessories common with the series S-N contactors
- Finger protected types are available (DIN 57106/VDE 0106 Part 100)

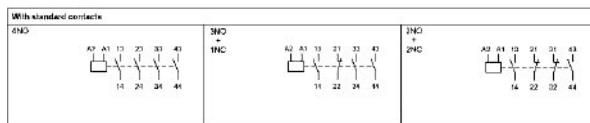

## SR - N422 AC120V

Control Type		Contact Arrangement		Coil Voltage
SR	AC Operated	N440	4 NO and 0 NC	See Table Pg. 13
SRD	DC Operated	N431	3 NO and 1 NC	
		N422	2 NO and 2 NC	

## SR-N Spare Coils and Accessories

Spare coils and accessories are common with the series S-N contactors.

## SR-N Contact Arrangements

**Note:** When this module is mounted, auxiliary contact block should not be mounted.

# Vacuum Contactors

## Series SH-V Medium Voltage

The Mitsubishi Electric series SH-V contactors are specially designed for the areas of mining, pumping, sawing and other applications where voltages above 1500VAC are frequently used. They are normally rated at 1500V with short circuit capability of 4KA (CO five times). Withstand rating for 1 minute is 6.5kV and impulse rating is 15kV. Withstand rating of the gap is 10kV. Contactors are UL Recognized and CSA Certified up to 600V. They are furnished with 2 NO and 2 NC A600 auxiliary contacts. Reversing units are also available. The SH-V160, 320 and 400 non-reversing contactors have an optional insulating barrier that raises the insulating rating to 3300V, the withstand rating to 16kV and the impulse rating to 45kV. Short circuit capability and contact gap withstand rating remain at 4kV and 10kV respectively.

## Type Designation

SH-V 160QM AC100V		Coil Designation See Coil Designation Table on next page	
Control Type	Frame Size		
SH-V Non-Reversing	160QM	160A frame	
SH-2XV Reversing	320QM	320A frame	
	400QM	400A frame	
	600 (*1)	600A frame	

**Note 1:** Only AC operated non-reversing type is available for Frame size 600.  
SH-V600 is not presently certified by CSA.

## Specifications

Frame Size		V	V160	V320	V400	V600

Short Circuit Interrupting Current	A			4,000		5040
Withstand Current For Short Time	for 2 Seconds		kA	4		6
	for 10 Milliseconds		kA	33		
Rated Operating Current of Aux. Contacts	Category AC-15	240 VAC	A	5		
		480 VAC		3		
		660 VAC		3		
	Category DC-13	110 VAC		1.2		
		220 VAC		0.2		

Note: A surge absorber is required for motors less than 5.5kW only.

## Characteristics

Frame Size		V160	V320	V400	V600
Mechanical Life (*1)	Operations		2.5 million		
Electrical Life (*2) (Category AC3)	Operations		0.5 million		
Permissible Ambient Temperature	Degree C		-10 to +55		
Coil Voltage Tolerance	Times		0.85 to 1.1 (rated coil voltage)		
Coil Consumption	AC Operated	Inrush VA	550		1150
		Sealed VA	45		55
		Watts W	5.2		7.3
	DC Operated	Inrush VA	500		—
Operating Time (Approx.)	Make	Msec	40		65
	Break	Msec	130		80
Make & Break Current Capacity	Make	Times	10 (at AC3 rated operating current)		
	Break	Times	8 (at AC3 rated operating current)		
Permissible Switching Frequency	Operations / Hour		1,200		
Vibration Resistance	10-55Hz	m/s <sup>2</sup>		19.6	
Shock Resistance	Sine Wave Pulse	m/s <sup>2</sup>		49	

### Notes:

1. Mechanical life of vacuum tube is 1 million.
2. When the load is three phase capacitors, electrical life is 0.1 million operations.

## Coil Designation

Coil Designation	Rated Voltage
AC100V	100~127V 50/60Hz
AC200V	200~240V 50/60Hz
AC400V	380~440V 50/60Hz
AC500V	460~550V 50/60Hz

## Spare Parts and Accessories

Contactor Model Number	Coil Model Number (*1, *2)	Main Contact Model Number	Auxiliary Contacts Model Number		3300V Barrier
			Replacement (1NO-1NC)	Add-on (2NO-2NC)	
SH-V160	S-K220QM-COILAC□□□V	SHVBJ333C100G01 (*3)	UA-AXV1	UA-AXV2 (*4)	SHVBJ333D180G21

SH-V400		SHVBJ333C100G03 (*3)			SHVBJ333D180G23
SH-V600		SHVBJ336C100G10 (*3)		UA-AXV4	—

Notes:

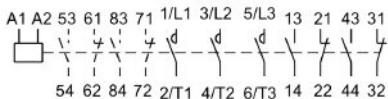

- Insert appropriate voltage from coil designation table above.
- Please note that only AC100V and AC200V are available with QM (quick make). Remove "QM" from pin for AC400V and AC500V coils.
- Main contact kits consist of 3 vacuum bottles and any hardware needed attached to them.
- Consists of two UA-AXV1 contact blocks on a mounting plate with an interlock to be installed on the left side of the contactor.

## Surge Absorber

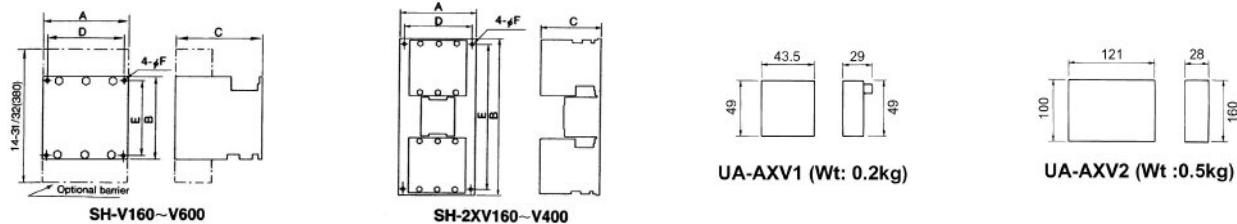

As the vacuum tubes of the SH-V use a special contact material, the surge voltage by current chopping is very small. Surge absorbers are required only for motors smaller than 5.5kW.

Applicable Voltage	Ordering Designation
up to 440VAC	UA-SU4
up to 550VAC	UA-SU5
up to 660VAC	UA-SU6
up to 1,000VAC	UA-SU10
up to 1,500VAC	UA-SU15

# High Voltage

## Series VZ-C

### Features – Compact & Lightweight

Thanks to the use of a 3-phase single-unit molded insulated-case, VZ-C units up to 6kV are even smaller than our previous 3kV types. These can also be used on both 6kV and 3kV applications.

### Available Types:

VZ-2-PEC-5: 200A rated continuous current / 4kA rated interrupting current.

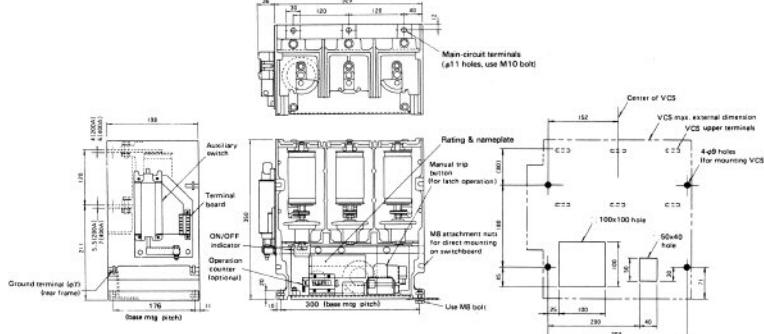

VZ-4-PEC-5: 400A rated continuous current / 4kA rated interrupting current.

VZ-5-PEC: 450A rated continuous current / 6.3kA rated interrupting current.

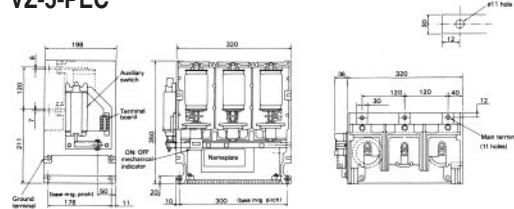

VZ-8-PEC: 800A rated continuous current / 4kA rated interrupting current.
